Our Global Summit for Eye Health commitment: Free eye health survey licences

As part of the Global Summit for Eye Health, Peek Vision and the International Centre for Eye Health (ICEH) at the London School of Hygiene & Tropical Medicine commit to providing free RAAB7 and SEHRA survey software licences until the end of 2030. RAAB7 and SEHRA are the leading population-level eye health survey tools, delivered through the Peek software platform.

The commitment will help countries generate the vital data they need to plan, monitor and improve eye health services. Join us in translating this pledge into tangible impact.

School Eye Health Rapid Assessment (SEHRA)

SEHRA is part of the Peek software platform and is the only standardised survey tool for evaluating children's eye health needs at scale using robust statistical methods. It generates data to plan, implement and monitor school eye health services, and to advocate for school eye health. Since its launch in 2023, SEHRA has been used in 10 countries, surveying over 54,000 children.

Commitment (2027 - 2030 inclusive)

We will provide **free** SEHRA licences (normally £5,000 per SEHRA survey) for:

- Any existing or new Peek-powered school eye health programme
- Nationally representative SEHRAs in any country (up to 2 per year) *
- Regional SEHRAs in Kenya, Nigeria, Pakistan, India & Ethiopia (up to 4 per country, per year)

SEHRA licence includes:

- Peek support for SEHRA planning, training and implementation
- Use of Peek software for data collection and analysis
- Data analysis and comprehensive programme planning report

What partners contribute:

The standard in-country implementation costs for SEHRA:

- Survey team costs
- Devices and equipment
- Training logistics
- Treatment for children identified

**A nationally representative SEHRA draws a stratified random sample from across the whole country, not just one region or district.*

RAAB7 (Rapid Assessment of Avoidable Blindness)

RAAB7, co-developed and maintained by ICEH and Peek, is a leading population-based survey tool, assessing the prevalence and causes of vision impairment and blindness in adults aged 50+. With 429 surveys across 86 countries since 2000, it is the largest contributor to global estimates of sight loss and the data populate the IAPB Vision Atlas.

Commitment (2027 - 2030 inclusive)

We will provide **free** RAAB7 licences (normally £5,740 per survey) for RAAB7 surveys in any location (up to 50 per year total, covering either single surveys or a series).

RAAB7 licence includes:

- ICEH online staff support for survey design and oversight
- Use of Peek software for data collection and analysis
- Data report for comprehensive programme planning

What partners contribute:

The standard in-country implementation costs of a RAAB7:

- RAAB7 trainer fees and travel
- Devices and equipment
- Training logistics and survey team
- Treatment for people identified

Many countries have not conducted a RAAB survey for more than 10 years, and these locations in particular would benefit from current population-level eye health data to support advocacy efforts, fundraising and programme planning.

Collaborate on the commitment

We are inviting IAPB members, governments and partners to work with us to deliver better quality data, supporting the Summit's goal to accelerate progress towards ending avoidable sight loss.

If you're delivering services in school or community settings, and have capacity to implement a SEHRA or RAAB7 to generate data to further strengthen your programmes or advocacy efforts, we'd welcome a conversation to discuss whether these commitments could support your work.
